### **DETAILED ACTION**

Claims 1-16 are pending and subject to restriction requirement.

#### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, drawn to a pharmaceutical composition with photoactivable rhodamine derivatives.

Group II, claim(s) 2 and 9, drawn to an unspecified method of use.

Group III, claim(s) 3, 10, drawn to a method for preventing graft-versus-host-disease (GVHD) in a patient by transplanting allogenic stem cells treated with photoactivable rhodamine derivatives.

Group VI, claim(s) 4-6, 11, 12, 15 and 16, drawn to a method for treating immunologic disorder in a patient by transplanting hematopoietic cells treated with photoactivable rhodamine derivatives.

Group V, claim(s) 7 and 8, drawn to a method for evaluating transport mechanism of immune and malignant cells by flow cytometry.

Group VI, claim(s) 13 and 14, drawn to a method of manufacturing a medicament with photoactivable rhodamine derivatives.

The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

This application contains claims drawn to more than one of permissible combinations of invention categories such as a product (Group I) and several methods of using the product and/or

making the product (Groups II-V). The methods of use are different as claimed because they encompass applications of rhodamine derivatives in various systems such as an *in vivo* system (Group III and IV) and an *in vitro* system for flow cytometry (Group V). The methods of administration and /or methods for preventing or treating disorders are different methods as claimed and they encompass applications of different cells as claimed to different patents as claimed. Furthermore, pharmaceutical products with photoactive agents including rhodamine derivatives are known in the prior art, for example: US 4,684,521 (see abstract). Thus, the unity of inventions is broken.

It is also noted that claims 2 and 9-15 provide for the use of rhodamine derivatives, but, since these claims do not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced. Some of these claims have been provisionally grouped in the instant office action as explained above. But they will be rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
